Task 4: Mini Project – Prototype Design

Project Title

FoodGo – Food Delivery Mobile Application Prototype

Objective

The objective of this project is to design and develop a clickable prototype for a food delivery mobile application named FoodGo. The prototype demonstrates the complete user journey from application launch to successful food order placement while ensuring a smooth and user-friendly experience.

Tool Used

- Figma

Project Description

FoodGo is a food delivery mobile application designed to help users browse food items, view restaurant information, place food orders, and complete payments efficiently. A clickable prototype was created using Figma to simulate real-world user interactions and demonstrate the functionality of the application.

Prototype Overview

The prototype consists of multiple interconnected screens that guide users through the complete food ordering process. Interactive navigation links were added between screens to create a realistic application experience.

Screens Included

1. Splash Screen

The splash screen introduces the FoodGo application through its logo, branding, and a “Get Started” button that directs users to the registration page.

2. Sign Up Screen

The sign-up screen allows users to register using their email and password. Social media sign-up options are also provided for convenience.

3. Home Screen

The home screen displays food categories, featured food items, and navigation options. Users can browse and select food items according to their preferences.

4. Food Details Screen

This screen provides detailed information about a selected food item, including its image, rating, description, and price. Users can proceed to place an order directly from this screen.

5. Restaurant Details Screen

The restaurant details screen displays information such as restaurant name, cuisine type, ratings, location, delivery time, menu items, and contact details.

6. Order Summary Screen

This screen allows users to review their order, view pricing details, select payment methods, and proceed with payment.

7. Order Success Screen

The final screen confirms successful payment and order placement. A confirmation message is displayed to provide feedback to the user.

Prototype Flow

Splash Screen → Sign Up Screen → Home Screen → Food Details Screen → Restaurant Details Screen → Order Summary Screen → Order Success Screen

Interactive Features

- Clickable navigation buttons
- Interactive screen transitions
- Food item selection flow
- Order placement workflow
- Payment confirmation process
- User-friendly navigation structure

Design Approach

The prototype was designed based on key UI/UX principles:

- Simple and intuitive navigation
- Consistent visual design
- Clear content hierarchy
- User-centered experience
- Interactive user flow
- Accessible interface design

Key Features

- User Registration
- Food Browsing
- Food Details View

- Restaurant Information
- Order Management
- Payment Processing
- Order Confirmation

Benefits of the Prototype

- Demonstrates complete application workflow
- Improves understanding of user interactions
- Helps identify usability issues before development
- Provides a realistic user experience
- Serves as a foundation for future application development

Conclusion

The FoodGo prototype successfully demonstrates a complete food ordering experience through an interactive and user-friendly interface. The prototype effectively showcases the application's workflow, navigation structure, and functionality, making it suitable for future development and implementation as a full-scale food delivery application.
