

CodeAlpha UI/UX Internship

Task 1: Wireframing & Low-Fidelity Design

Project Title

FoodGo – Food Delivery Mobile Application

Objective

The objective of this project is to design a low-fidelity wireframe for a food delivery mobile application named FoodGo. The wireframe focuses on the application's structure, user flow, and screen layout before applying colors, images, and advanced visual elements.

Tool Used

- Figma

Project Description

FoodGo is a food delivery application designed to help users browse food items, view restaurant details, place orders, and complete payments easily. The low-fidelity wireframe was created to visualize the overall user experience and navigation flow of the application.

Screens Designed

1. Splash Screen

The splash screen serves as the entry point of the application. It contains the FoodGo logo, application name, and a “Get Started” button that directs users to the registration page.

2. Sign Up Screen

The sign-up screen allows new users to create an account by entering their personal details. It also provides alternative sign-up methods through social media platforms.

3. Home Screen

The home screen displays food categories and featured food items. Users can browse different food options and select their preferred item.

4. Food Details Screen

This screen provides detailed information about the selected food item, including its name, description, rating, and price. Users can proceed to place an order from this page.

5. Restaurant Details Screen

The restaurant details screen displays information about the selected restaurant, including its location, ratings, and available menu items.

6. Order Summary Screen

The order summary screen allows users to review their selected items, view pricing details, and confirm their order before making payment.

7. Payment Success Screen

This screen confirms that the payment has been completed successfully and displays a thank-you message to the user.

User Flow

Splash Screen → Sign Up → Home Screen → Food Details → Restaurant Details → Order Summary → Payment Success

Design Approach

The wireframe was designed using low-fidelity UI/UX principles. The focus was placed on:

- Clear navigation
- Simple screen structure
- Easy-to-understand user flow
- Proper content placement
- Improved user experience

Key Features

- User registration
- Food browsing
- Food item details
- Restaurant information
- Order summary
- Payment confirmation

Conclusion

The FoodGo low-fidelity wireframe successfully demonstrates the basic structure and workflow of a food delivery application. The design establishes a strong foundation for future high-fidelity UI development and interactive prototyping.
